

PROFESSIONAL SUMMARY

Data-driven backend engineer with 3 years of experience designing and maintaining high-performance server-side applications. Skilled in Python, Django, and microservices architecture. Strong background in database optimization, cloud deployments, and building secure RESTful APIs. Comfortable working in fast-paced startup environments with a focus on scalability and reliability.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, Bash

Frameworks: Django, Flask, FastAPI, Express.js

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS (Lambda, RDS, S3), Docker, Kubernetes, Terraform, GitHub Actions

Other: REST API, Microservices, Celery, RabbitMQ, Linux, Agile/Scrum

WORK EXPERIENCE

Backend Engineer

Cloudify Systems — Austin, TX | Mar 2022 – Present

- Designed and deployed microservices using FastAPI and Docker, reducing deployment time by 50%.
- Optimized PostgreSQL queries and implemented indexing strategies, cutting API response time by 45%.
- Built an asynchronous task queue using Celery and RabbitMQ to handle 10,000+ background jobs daily.
- Set up Kubernetes clusters on AWS EKS for auto-scaling and high availability.

Junior Backend Developer

DataNest Pvt. Ltd. — Remote | Aug 2020 – Feb 2022

- Developed Django REST Framework APIs consumed by React and mobile clients.
- Wrote and maintained automated test suites using pytest, achieving 85% code coverage.
- Migrated legacy MySQL database to PostgreSQL with zero downtime using blue-green deployment.
- Integrated third-party payment gateway (Stripe) and implemented webhook handlers.

EDUCATION

Bachelor of Engineering in Information Technology

University of Texas at Austin — Graduated May 2020

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (2023)
- Certified Kubernetes Administrator – CKA (2022)
- Python Institute PCEP Certification (2020)

PROJECTS

API Gateway Service — Built a centralized API gateway with rate limiting, auth, and logging using FastAPI and Redis.

EventStream — Real-time event processing pipeline using Kafka, Python, and AWS Lambda.

SecureVault — Secrets management tool built with Flask and AES-256 encryption for team credential sharing.
